1. **Competitions check papers and see if it is relevant: NSU, STEMS, LIMIT**

   LIMIT: I went through a few papers (Category C) and found out that they are good and involve many core ideas, and since it's online it is worth giving it.
   STEMS: The 2026 probability paper wasn't available on the website, but I went through the math papers and they felt kinda hard but again since it's online and if no clashes with Shaastra people members (and even us leads) can give. But it feels harder than LIMIT.
   NSU: It feels like CYSEC will do most of the questions after reviewing the R1 and R2 papers, and also due to the schedule of it being right after SMMC and just before quizzes I don't think it is worth it.

2. **If Feedback form, what in the form (be very specific, add specific questions you want in the form) (It's Anonymous)**

   - Pacing of teaching sessions
   - Clarity of explanations
   - Time management for meetings
   - Problems discussed during sessions are they helpful for learning
   - Were the topics useful/interesting
   - Problem Sets difficulty/ Is time sufficient to attempt all the questions
   - Any feedback on the leads

   Topics and next setters/teachers for next meeting will be discussed in the weekly meets. And competitions will have separate meets as mentioned in calendar and spoken in interview.
